Safety Wire Twister

401-03819 9"

401-03816 6.75"

Made from alloy steel forgings, these SAFETYTWIST pliers offer the user rigid construction, tapered jaws, finely finished cutting edges and a new "long life" twist mechanism. The induction hardened cutting jaws will cut safety wire up to .060 diameter, or two twisted strands of .041" dia. wire. Tapered jaws allow easy access into confined areas. Specially finished jaw faces provide for maximum grip-minimum slip, on the wire being twisted.

Safety Wire Kits

401-03820

9" Twister w/ 25 ft. wire

401-03817

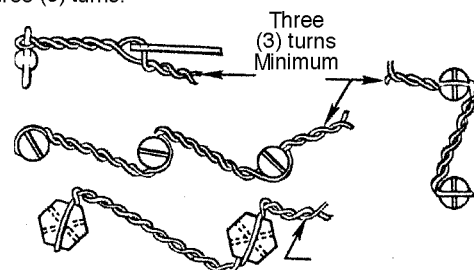

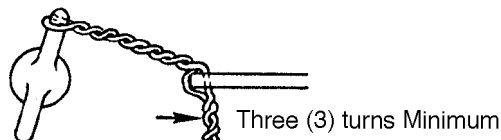

6.75" Twister w/ 25 ft. wire

Helpful Hints For Twisting Your Wire

Lockwire should be installed only one at a time. If the wire is removed, for any reason, it should be destroyed. Kinks and sharp bends should not be made in lockwire.

Lockwire should be as short as possible, attached in the most direct way using the two (2) wire only and installed so the lockwire tends to tighten the bolt or nut. The ends of the wire should have a minimum of three (3) turns.
